ELECTRONIC SAFETY MANAGEMENT SYSTEM

Asssa's Electronic Safety Management Software System is able to offer our clients a process that is cloud based, with Interactive Dashboards and Mobile Apps. The system enables effective work health and safety management through;

- Risk, hazard identification
- Workplace safety incident investigations
- Job Safety Analysis (JSA)
- Inspections and audits
- Health and safety action management
- Training Management

There really is no other safety software system that performs by producing reports, statistics and graphical data that can be utilised at corporate meetings to improve the overall management of safety within an organisation.

Asssa's electronic safety management software system offers our clients the reassurance with the knowledge that the following is being met;

Legislative Compliance

Legislation places the primary health and safety duty on a person conducting a business or undertaking, who must ensure the health and safety of workers at the workplace.

Your organisation can comply by implementing processes including the identification and management of hazards, investigation of incidents, completion of Inspections and Audits as well as the completion of other safety related tasks including the effective management of actions.

Customised for your organisations size and scope

Asssa's Electronic Safety Management Software System has demonstrated scalability in bringing industrial strength functionality to even the smallest of firms, whilst still being administered by an overseeing authority, such as a State Safety Manager.

Third Party Management

Asssa's Electronic Safety Management Software System can be remotely managed by Asssa. Some of our current clients utilise and proficiently administer the system, but Asssa are able to oversee aspects such as investigations, training and how alerts are being managed. These alerts can also be directed to Asssa who are able to assist with close-outs and updates.

Tracking

All modules are integrated to enable you to track relationships, such as those between hazards and incidents. Decisions and actions are managed in a central database providing an instant snapshot of your current situation, making it easy for you to track actions and the status of each action. Management reports, reminders and overdue notifications ensure the commitment of all parties. All data is collated and presented in up-to-date and meaningful reports, graphs and statistics.

Reports

Asssa's Electronic Safety Management Software System can assist you with making an impression by instantly producing outputs in real time which rely on up to date statistics.

Data Synchronisation

Asssa's Electronic Safety Management Software System can access Safety Management Documents Offline and download procedures and other documents for offline availability onsite.

To gain a demonstration of Asssa's Electronic Safety Management Software System please visit our website at www.asssa.com.au or phone 9364 6498.
